ORGANIZATIONAL EXCELLENCE · OE 2.0

From people protecting performance to systems protecting performance

DESERT ROSE
HURGHADA RED SEA

THE AIM

Close the loop. Every finding, from a shift checklist, an audit or a guest concern, gets one owner, a due date and a confirmed fix. Leaders see it the next morning in the Excellence Gateway.

> *"We can't measure what we can't observe, and we can't manage what we can't measure."*
> *OE slogan, 2014*

Strengthen Assign and Follow up
Today's cycle is strong at Capture and Measure, and thin in between.

One list, one standard
Standardized processes instead of WhatsApp, paper and personal habits.

Honest numbers
Scores that show what needs action, read straight from the work itself.

Same language everywhere
From the room attendant's phone to the morning briefing and the OKR report.

AREA	WHAT WE ARE FIXING (TODAY)		WHAT WE GAIN (OE 2.0)
Follow-up	Follow-up on problems runs on WhatsApp and paper. Nothing shows what is still open.	→	One problem list for every finding, with a photo, one owner and a due date. Overdue shows automatically.
Audits	Audits are done on paper and typed up later. The due-date column is empty on every quality sheet; no owners are named.	→	OE audits on the phone, with photos. Any finding becomes an action with an owner and a due date on the spot.
Repeated findings	Findings come back ("Repeated", "despite general cleaning"). Orders are marked done without the work.	→	A fix counts only when someone else confirms it. Places with repeated problems are flagged.
Shift standards	Most teams have no shift checklist. Audits note "no closing check".	→	A short shift checklist for each place, opened by QR code and checked by the supervisor.
Guest concerns	Departmental Concerns and Exclusivi alerts reach the department fast, but the action is not tracked to closure.	→	"Add as a problem" turns a guest concern into a tracked action in the same list.
HSSE	Serious safety findings can sit outside the score ("Max 0").	→	Safety first: always at the top of every list, needs a temporary measure, open count seen by the GM and Owner.
OKR scorecard	Too forgiving to steer by: "On Track" from 90%. Water over its limit still reads On Track.	→	Four clear statuses: Met, Close, Behind, At risk. A limit is read as a limit.
Reports	Data is built by hand in spreadsheets: typed-over values, #REF! cells, labels that differ between files.	→	Numbers come straight from the work done in the app. No retyping; the morning briefing runs on today's data.
Bonuses (next step)	Department scores include resort rows copied onto every sheet, and guest scores partly shaped by who is asked to review.	→	A draft scorecard of a few outcome KPIs per department, from high-integrity sources only. Never counts of problems reported or checklists ticked.

What stays the same: the Excellence Gateway, its four pillars (Financial, Operational, Guest experience, People & Culture), the Morning Briefing, OKRs, Exclusivi alerts and the monthly reports. OE 2.0 adds the missing link between finding a problem and fixing it.

ORGANIZATIONAL EXCELLENCE · OE 2.0

How it works

DESERT ROSE
HURGHADA RED SEA

CAPTURE | INTEGRATE | ANALYSE | ALERT | ASSIGN | FOLLOW UP | MEASURE | LEARN

Orange: where the OE app does the work. **Teal**: where the Excellence Gateway does the work. Same management cycle as today.

CAPTURE Where findings come from

Shift checklists
Line staff: pool & beach attendant, room attendant
Scan the QR code at the place. Tick each item or mark "could not do". Report a problem from any item, with a photo.

OE audits
Quality team, on the move
Two marks per item: steps followed, and result good. Any finding becomes a problem, with the note and photo carried over.

Guest concerns
Departmental Concerns, Exclusivi, review platforms
In the Morning Briefing, "Add as a problem" fills in the place, type and the guest's words.

Seen on the spot
Anyone, including the MOD round
What, where, a photo, condition or care, and whether it is a safety risk.

↓ ONE PROBLEM LIST, ONE SET OF RULES ↓

ASSIGN · FOLLOW UP The problem loop

Reported
Place, photo, type. A safety risk needs a temporary measure first.

→

Assigned
Supervisor, department head or OE
One owner and a due date. It shows on the owner's badge.

→

Fixed
The owner
Does the work and marks it fixed.

→

Confirmed
Someone else for that area
Never the person who fixed it. Not fixed? Back to the owner.

→

Closed
Counts toward "closed on time" and days to fix.

Overdue
Automatic once the due date passes. Shown in red to the owner and leaders.

CAPEX list
Only condition problems in old areas. Leaves the team's count; goes to the Owner's list.

Checklist sent back
The supervisor confirms each finished checklist, or sends it back with a note.

Works offline
Saved on the phone and kept when the connection drops.

↓ THE SAME COUNTS AND WORDS FEED EVERY VIEW ↓

MEASURE · LEARN Who looks at what, and when

Supervisor
Through the shift
Checklists to confirm, fixes to confirm, problems to assign.

→

Director
Every morning
Department overview: safety, today's checklists, fixes not yet confirmed, how long problems wait, where they cluster.

→

Morning Briefing
GM and each department, daily
One page per department: KPIs against target, today in the OE app, yesterday's and MTD guest concerns, issues to discuss.

→

GM, CEO, Owner
GM daily · CEO daily and weekly · Owner weekly
Safety, what needs a push, the weekly trend, the CAPEX list.

→

Excellence Gateway
Monthly OKR cycle
Four pillars, each KPI against target: Met, Close, Behind, At risk. Draft scorecard for future bonuses.

Back into the loop: anything raised in a briefing or by a leader is added as a problem, with an owner and a due date. **Rules:** safety first · one owner per problem · no one confirms their own fix · overdue is automatic · counts by place, never by person · Arabic and English.
