From people protecting performance to systems protecting performance

DESERT ROSE
HURGHADA RED SEA

THE AIM

Every finding, whether it comes from a shift checklist, an audit or a guest, should end with one owner, a due date and a fix that someone else has actually checked. Leaders should then see where it stands the next morning, in the Excellence Gateway.

> *"We can't measure what we can't observe, and we can't manage what we can't measure."*
> *OE slogan, 2014*

Strengthen Assign and Follow up
We are already good at capturing and measuring. The weak part is what happens in between.

One list, one standard
Today follow-up lives in WhatsApp groups, on paper and in people's heads, so it depends on who is on shift.

Honest numbers
Scores should show what needs action, and come straight from the work rather than from someone retyping it.

The same words everywhere
The room attendant's phone, the Morning Briefing and the OKR report should all call things by the same name.

AREA	WHAT WE ARE FIXING (TODAY)		WHAT WE GAIN (OE 2.0)
Follow-up	Problems get followed up on WhatsApp and on paper, which means nobody can really say what is still open.	→	One list for every problem, each with a photo, one owner and a due date. If it slips past the due date, it shows as overdue without anyone having to chase it.
Audits	Audits are done on paper and typed up later. The due-date column is empty on every quality sheet, and nobody is named as owner.	→	OE audits happen on the phone, with photos, and any finding can become an action with an owner and a due date right there.
Repeated findings	The same findings keep coming back ("Repeated", "despite general cleaning"), and some orders get marked done when the work wasn't.	→	A fix only counts once someone other than the person who did it has checked it. Places where problems keep coming back get flagged.
Shift standards	Most teams don't have a shift checklist, and the audits often say "no closing check".	→	Each place has a short shift checklist, opened with a QR code and checked by the supervisor.
Guest concerns	Departmental Concerns and Exclusivi alerts reach the department quickly, but what happens after that isn't really tracked.	→	"Add as a problem" turns a guest concern into an action in the same list, so we can see when it is actually fixed.
HSSE	Some serious safety findings sit outside the score ("Max 0"), so they are easy to miss.	→	Safety problems always sit at the top of every list and need a temporary measure first, and the GM and Owner can see how many are open.
OKR scorecard	It is quite forgiving. "On Track" starts at 90%, and water use reads On Track even when it is over the limit.	→	Four clear statuses (Met, Close, Behind, At risk), and a limit is treated as a limit.
Reports	A lot of the data is built by hand in spreadsheets, with typed-over values, #REF! cells and labels that change from file to file.	→	The numbers come from the work people actually do in the app, so nobody retypes anything and the Morning Briefing runs on today's data.
Bonuses (next step)	Department scores include resort rows copied onto every sheet, and some guest scores depend on who we ask to leave a review.	→	A draft scorecard with a few outcome KPIs per department, taken only from sources we trust. I think it should never count problems reported or checklists ticked, because that rewards hiding problems.

What stays the same: the Excellence Gateway and its four pillars (Financial, Operational, Guest experience, People & Culture), the Morning Briefing, OKRs, Exclusivi alerts and the monthly reports. None of that goes away. OE 2.0 adds the part that is missing today, which is the link between finding a problem and actually fixing it.

How it works

DESERT ROSE
HURGHADA RED SEA

CAPTURE | INTEGRATE | ANALYSE | ALERT | ASSIGN | FOLLOW UP | MEASURE | LEARN

Orange is where the OE app does the work, and **teal** is where the Excellence Gateway does it. It is the same management cycle we use today.

CAPTURE · Where findings come from

Shift checklists
Line staff: pool & beach attendant, room attendant
Staff scan the QR code at the place and tick each item, or mark it "could not do". They can report a problem from any item, with a photo.

OE audits
Quality team, on the move
Each item gets two marks: were the steps followed, and is the result good? Any finding can become a problem, and the note and photo come with it.

Guest concerns
Departmental Concerns, Exclusivi, review platforms
In the Morning Briefing, "Add as a problem" fills in the place, the type and the guest's own words.

Seen on the spot
Anyone, including the MOD round
What it is, where, a photo, whether it is condition or care, and whether it is a safety risk.

↓ EVERYTHING GOES INTO ONE PROBLEM LIST, WITH ONE SET OF RULES ↓

ASSIGN · FOLLOW UP · The problem loop

Reported
Place, photo and type. If it is a safety risk, a temporary measure comes first.

→

Assigned
Supervisor, department head or OE
It gets one owner and a due date, and shows up on the owner's badge.

→

Fixed
The owner
The owner does the work and marks it fixed.

→

Confirmed
Someone else for that area
Never the person who fixed it. If it isn't really fixed, it goes back to the owner.

→

Closed
It counts toward "closed on time" and how many days fixes take.

Overdue
Happens on its own once the due date passes, and shows in red to the owner and to leaders.

CAPEX list
Only for condition problems in old areas. It leaves the team's count and moves to the Owner's list.

Checklist sent back
The supervisor confirms each finished checklist, or sends it back with a note.

Works offline
Everything saves on the phone, so a weak signal doesn't lose anyone's work.

↓ THE SAME COUNTS AND WORDS FEED EVERY VIEW ↓

MEASURE · LEARN · Who looks at what, and when

Supervisor
Through the shift
Checklists to confirm, fixes to confirm and problems to assign.

→

Director
Every morning
The department overview: safety, today's checklists, fixes nobody has checked yet, how long problems have waited and where they keep clustering.

→

Morning Briefing
GM and each department, daily
One page per department, with KPIs against target, today in the OE app, yesterday's and MTD guest concerns, and what needs discussing.

→

GM, CEO, Owner
GM daily · CEO daily and weekly · Owner weekly
Safety, what needs a push, the weekly trend and the CAPEX list.

→

Excellence Gateway
Monthly OKR cycle
The four pillars, each KPI against target (Met, Close, Behind, At risk), and a draft scorecard for future bonuses.

Back into the loop: anything raised in a briefing or by a leader is added as a problem with an owner and a due date, and followed up like everything else. **The rules:** safety first, one owner per problem, nobody confirms their own fix, overdue happens on its own, and we count by place, never by person. In Arabic and English.
